

BEP-20 STANDARD • BNB SMART CHAIN

LUXA TOKEN WHITE PAPER

Rare. Decentralized. Built for Web3.

Version: 1.0

Year: 2026

Status: Official White Paper

Ecosystem: Telegram Web3 App

TABLE OF CONTENTS

- | | |
|---------------------------------------|--|
| 1. Introduction & Vision | 8. Governance, Security & Immutability |
| 2. The Industry Problem | 9. Market Analysis & Positioning |
| 3. The LUXA Solution & Scarcity Model | 10. Development Roadmap |
| 4. Technical Architecture & Stack | 11. Team & Transparency Philosophy |
| 5. Tokenomics & Supply Allocation | 12. Regulatory & Legal Compliance |
| 6. Algorithmic Mining Mechanism | 13. Risk Factors |
| 7. Reward & Referral System | 14. Legal Disclaimer |

1. INTRODUCTION

LUXA is a BEP-20 standard utility token natively deployed on the **BNB Smart Chain (BSC)**. The foundation of LUXA rests upon a single, non-negotiable economic principle: *verifiable, mathematical scarcity combined with absolute on-chain transparency*.

Unlike conventional micro-cap assets characterized by hyperinflation, speculative hype, and unchecked administrative privileges, LUXA is architected with a strictly limited supply and an intentionally calibrated emission rate. It is engineered to be rare, decentralized, and durable over time—operating strictly under deterministic smart contract rules.

2. THE PROBLEM

The cryptocurrency ecosystem is saturated with community and tap-to-earn tokens that suffer from fatal economic and structural vulnerabilities, ultimately destroying participant value and eroding trust.

MARKET PROBLEM	UNDERLYING STRUCTURAL FLAW	ECONOMIC CONSEQUENCE
Infinite or Hidden Supply	Absence of an immutable hard cap	Continuous dilution and irrecoverable price collapse
Arbitrary Minting Privileges	Contract owner retains rights to create new tokens	High risk of sudden liquidity dumping and rug-pull scams
Hyper-Accelerated Mining	Billions of tokens emitted within days	Total loss of scarcity and severe supply overhang
Opaque Governance & Centralization	Unverified code with hidden backdoor permissions	Critical loss of trust and market alienation
Lack of Technical Documentation	Closed codebases without public explorer verification	Total inability for users to perform independent auditing

3. THE LUXA SOLUTION

LUXA eliminates these vulnerabilities through a trustless infrastructure rooted in cryptographic certainty and mathematical rigor:

- ✓ **Hard-Capped Supply:** Exactly 1,000,000 LUXA tokens. No subsequent minting function exists.
- ✓ **Renounced Ownership:** Permanently trustless—no administrator can alter parameters or freeze balances.
- ✓ **Ultra-Low Emission Rate:** Designed to maintain genuine scarcity and prevent rapid hyperinflation.
- ✓ **Publicly Verified Code:** Smart contract source code is 100% verified and publicly visible on BscScan.
- ✓ **Democratic Community Distribution:** Accessible globally via Telegram Mini App without requiring costly mining hardware.

Base Emission Rate (Mining Rate):

0.00000001 LUXA per tick (time unit)

→ Exactly 100,000,000 ticks are required to mine 1 whole LUXA token. A deliberately disciplined, low-velocity emission model inspired by Bitcoin's early scarcity principles.

4. TECHNICAL ARCHITECTURE

LUXA combines the speed and low fees of BNB Smart Chain with an enterprise-grade cloud backend and Telegram's interactive mini app interface.

Component	Technology Stack	Primary Functionality
Blockchain Network	BNB Smart Chain (BSC)	Fast settlement, ultra-low gas fees, and robust decentralized consensus
Token Standard	BEP-20	Universal interoperability with Web3 wallets (MetaMask, Trust Wallet) and DEXs
Smart Contract	Solidity (Verified on BscScan)	Immutable execution of transfers, balances, and strict supply caps
Backend Engine	Node.js + Express	Secure session lifecycle handling, mining state calculation, and API validation
Database Layer	MongoDB Atlas	High-performance, fault-tolerant persistence for session tracking and user balances
Client Frontend	Telegram Mini App (TMA)	Lightweight, responsive Web3 interactive client optimized for mobile UX
Bot Integration	Telegram Bot API	User authentication, automated session-completion alerts, and direct commands
Cloud Infrastructure	Microsoft Azure Cloud	Resilient high-availability hosting with global CDN and DDoS mitigation

5. Tokenomics

The economic model of LUXA is designed to preserve long-term rarity and prevent concentrated supply dumps.

Official Smart Contract Address (BSC)

0x71b76bba6d913baca78ac26b9168f0e2da9e1b5a

Token Parameter	Official Specification
Token Name	LUXA
Token Ticker / Symbol	LUXA
Blockchain Network	BNB Smart Chain (BSC)
Total Supply	1,000,000 LUXA (Fixed Hard Cap)
Decimals	6
Ownership Status	Renounced (Permanently Trustless)

SUPPLY ALLOCATION BREAKDOWN

ALLOCATION CATEGORY	SHARE (%)	AMOUNT (LUXA)	OPERATIONAL PURPOSE
Mining & Community Airdrop	70%	700,000	Progressive emission pool for active app miners and community engagement
Initial DEX Liquidity	15%	150,000	Dedicated liquidity pairing on PancakeSwap to ensure smooth, transparent trading
Development & Marketing	10%	100,000	Server maintenance, infrastructure scaling, user acquisition, and app expansion
Ecosystem Reserve	5%	50,000	Contingency pool for future exchange listings, integrations, and audits

6. ALGORITHMIC MINING MECHANISM

Departing from compulsive tap-to-earn models, LUXA implements a **Passive Timed Mining Mechanism** that prioritizes consistency and structured user participation:

- ✓ **No Manual Screen Tapping:** Mining proceeds autonomously once a session is initiated.
- ✓ **Timed Session Cycles:** Each active mining window runs for a fixed 3-hour duration.
- ✓ **COLLECT & Restart Flow:** Upon timer completion, users trigger the "COLLECT" action to claim accumulated tokens and restart the mining cycle.
- ✓ **Optional Ad-Powered Boosters:** Users may temporarily accelerate their mining speed by engaging with partner sponsorships.

Session Example Configuration:

- Session Duration: 3 Hours (10,800 Seconds)
- Base Mining Rate: 0.00000001 LUXA per tick
- 2x Booster Effect: Multiplies the rate to 0.00000002 LUXA per tick for 1 hour

7. REWARD & REFERRAL SYSTEM

LUXA incorporates a transparent reward matrix to foster organic community expansion and daily platform utility:

REWARD TYPE	ASSIGNED REWARD VALUE	ELIGIBILITY CONDITION
Daily Check-In Bonus	0.0000005 LUXA	Consecutive daily login and check-in confirmation in the app
Referral Program	0.00005 LUXA per friend	Awarded upon successful onboarding and initial mining session by an invitee
Ad Booster Multiplier	2x Mining Rate Boost	Triggered via short sponsored ad impressions or designated micro-tasks
Community Missions	Variable (0.00001 – 0.001 LUXA)	Social channel participation, verification quests, and ecosystem challenges

8. GOVERNANCE AND SECURITY FRAMEWORK

Protocol safety is guaranteed by strict on-chain safeguards and code immutability:

- ✓ **Renounced Contract Ownership:** No developer or administrator retains backdoor access, privileged mint functions, or transfer pauses.
- ✓ **Zero Hidden Minting:** The mint function is completely absent from the deployed and verified bytecode.
- ✓ **Public Verifiability:** Every line of code and every transaction can be independently reviewed on BscScan.
- ✓ **Non-Custodial Balance Security:** Claimed assets are settled directly into user-controlled Web3 wallets.

9. MARKET ANALYSIS & POSITIONING

LUXA converges two high-growth sectors: the viral distribution of *Telegram Mini Apps* and the economic sustainability of *deflationary, low-supply tokens*.

PROJECT	PRIMARY MECHANISM	TOTAL SUPPLY MODEL	LUXA COMPETITIVE EDGE
Bitcoin (BTC)	Proof-of-Work / Halving	21,000,000 (Maximum Scarcity)	LUXA adapts strict scarcity principles to mobile Telegram accessibility
Notcoin (NOT)	Telegram Tap-to-Earn	102+ Billion (High Emission)	LUXA caps supply at only 1,000,000 tokens, eliminating extreme dilution
Hamster Kombat	Gamified Point Clicker	100 Billion (High Inflation)	LUXA eliminates compulsive clicking with disciplined session-based mining
LUXA	Passive Mining + Mini App	1,000,000 LUXA (Fixed)	Extreme scarcity, renounced ownership, verified immutable code

10. DEVELOPMENT ROADMAP

The evolutionary milestone plan for LUXA is executed across four targeted phases:

PHASE	MILESTONE DESIGNATION	CORE STRATEGIC OBJECTIVES	CURRENT STATUS
Phase 1	Community & Inception	Smart contract deployment, BscScan verification, Telegram channel launch, initial community airdrop.	COMPLETED
Phase 2	Mining App Integration	Launch of Telegram Mini App, algorithmic passive mining activation, booster systems, referral engine.	IN PROGRESS
Phase 3	Wallet & Claim Protocol	Web3 wallet connectivity (MetaMask, Trust Wallet), on-chain claim portal rollout, security audit.	UPCOMING
Phase 4	DEX Listing & Liquidity	PancakeSwap liquidity pool opening, price tracking indexation (CoinMarketCap, CoinGecko), ecosystem utilities.	PLANNED

11. TEAM & TRANSPARENCY PHILOSOPHY

LUXA is an entirely *community-driven* Web3 initiative. In alignment with cypherpunk principles, trust is anchored in cryptography rather than centralized intermediaries:

- ✓ Fully verified and open-source smart contract on BscScan.
- ✓ Renounced ownership ensuring no single party can alter protocol parameters.
- ✓ Strict mathematical cap of 1,000,000 tokens hardcoded into the contract.
- ✓ Decentralized growth powered exclusively by global user consensus and organic adoption.

12. REGULATORY & LEGAL COMPLIANCE

LUXA is strictly classified as a **Utility Token** designed for functional utility within its Telegram Mini App ecosystem:

- ✓ It does not confer corporate shares, equity, voting rights, or dividends.
- ✓ It does not constitute a security, financial derivative, collective investment scheme, or regulated banking product.
- ✓ It makes no promises of profit, capital appreciation, passive income, or investment returns.
- ✓ The project embraces international disclosure guidelines by providing transparent, honest, and unembellished technical documentation.

13. RISK FACTORS

Participants should exercise independent diligence and be fully cognizant of digital asset risk profiles:

- ✓ **Market & Volatility Risk:** Digital token valuations are subject to market sentiment and broad crypto market fluctuations.
- ✓ **Liquidity Risk:** Secondary market trading depth depends entirely on community-driven liquidity pools.
- ✓ **Network & Smart Contract Risk:** Underlying dependencies on BNB Smart Chain operational continuity and gas fees.
- ✓ **Self-Custody Responsibility:** Users hold sole accountability for securing their Web3 private keys and seed phrases.

14. LEGAL DISCLAIMER

GENERAL DISCLAIMER: This White Paper is published solely for informational and technical descriptive purposes. It does not constitute financial, investment, legal, taxation, or commercial advice, nor does it constitute an offer or solicitation to purchase securities in any jurisdiction. Cryptographic assets on decentralized networks involve significant market risks, including the potential risk of total capital loss. Users must conduct their own independent research (Do Your Own Research — DYOR) and ensure full compliance with their local legal frameworks before interacting with the protocol.
