

LUXA

ECOSYSTEM

WHITE PAPER V3.0

Institutional Specification & Cryptographic Technical Constitution

Abstract

LUXA Ecosystem represents an architectural breakthrough in decentralized state machines, introducing a sovereign Layer 1 blockchain engineered on the Cosmos SDK framework and CometBFT consensus engine (luxa-1). Overcoming the extractive dynamics of high gas barriers, ASIC monopolies, and speculative pre-mines, LUXA deploys a universal zero-barrier consensus model engineered to sustainably absorb 7,000,000+ pioneers without

reserve exhaustion. The protocol operates under an immutable supply ceiling of 1,002,500,000 LUXA, anchored by a Dual-Vault separation of powers: an Operational Mining Vault (500,000,000 LUXA) governed by a 10-year geometric halving emission curve and a Fibonacci harmonic streak matrix ($\phi \approx 1.618$), and the Conseil de la Genèse Sovereign Reserve (502,500,000 LUXA) secured by a native 3-of-5 Cosmos SDK multisig bound to 5 soulbound Ministerial Seals (Relics #0 through #4). On-chain settlement to client-side non-custodial Spider Vaults is validated via a 3-Key Gateway (60 continuous mining days, biometric Sumsu KYC, and network milestone achievement), sustained by a circular 8% protocol replenishment mechanism and zero Layer 1 network gas costs. LUXA establishes a mathematically verifiable, self-sustaining financial constitution where universal access and true sovereign ownership converge.

LUXA ECOSYSTEM WHITE PAPER v3.0

Sovereign Layer 1 Blockchain, Conseil de la Genèse & Universal Shared Wealth

Protocol Core: luxa-1 | Consensus Engine: CometBFT (Cosmos SDK Architecture)

Classification: Institutional Specification and Cryptographic Constitution

Date of Ratification: October 1, 2026

Signature and Genesis Seal: Yassine O (Citizen Zero • #0)

LUXA ECOSYSTEM™ — SOVEREIGN L1 ARCHITECTURAL CODEX

CITIZEN ZERO #0 — PROTOCOL SOVEREIGN SEAL

Yassine O

October 1, 2026

Table of Contents

1. Founding Declaration & Techno-Political Vision
2. Pillar 1: Dual-Vault Architecture & Global Supply (1,002,500,000 LUXA)
3. Pillar 2: Decennial Halving, Dynamic Difficulty (7M+ Pioneers) & Fibonacci Matrix
4. Pillar 3: On-Chain Migration Requirements, 60 Days & Sumsb KYC Protocol
5. Pillar 4: 8% Settlement Rule, Shard Forging & Zero-Gas Layer 1
6. Pillar 5: Conseil de la Genèse & the 5 Ministerial Seals (Native 3-of-5 Multisig)
7. Cross-Platform Spider Vault Mesh (Chrome, Android, Web & Telegram)
8. Official Ratification — Covenant in English
9. Certificate of Authenticity & Genesis Signing Act

1. Founding Declaration & Techno-Political Vision

Modern financial infrastructure and traditional blockchain models have replicated the same extractive dynamics as the centralized economy: entry barriers monopolized by proprietary ASIC hardware, opaque speculative pre-mines reserved for venture capital, and high network fees (gas fees) that erode the micro-value generated by users.

LUXA Ecosystem was born as a technological and ethical paradigm break: a sovereign Layer 1 blockchain built on the Cosmos SDK framework and the CometBFT consensus engine, designed to organically redistribute cryptographic wealth to the entire community with no upfront capital investment. Through a client-side zero-knowledge architecture, a deterministically split reserve and a ten-year decreasing-emission programme, LUXA establishes the first sovereign monetary system that rewards the consistency of human computational work.

2. Pillar 1: Dual-Vault Architecture & Global Supply (1,002,500,000 LUXA)

The entire economic ledger of LUXA resides immutably in the banking module (x/bank) of the luxa-1 chain. The maximum supply can never undergo further minting or discretionary inflation:

Total Protocol Supply = 1,002,500,000 LUXA (1,002,500,000,000,000 μ luxa)

Total Utility Assets = 16,000,000,000 SHARDS (16,000,000,000,000,000 μ shard)

To guarantee separation of powers and make the ecosystem auditable, the former single-treasury concept has been split into the Dual-Vault System:

TOTAL SUPPLY: 1,002,500,000 LUXA	
OPERATIONAL MINING & SETTLEMENT VAULT 50.00% (500,000,000 LUXA) <code>luxa1eg6d8axpw2t3en2g8t0g5qtj4wm2fh3q4tmkue</code> - Hot vault managed by backend daemons - Pays out the bridge-mining withdrawals - Collects the 8% settlement fee - Release bound to the Decennial Halving	CONSEIL DE LA GENÈSE 50.00% (502,500,000 LUXA) <i>Native Cosmos Multisig 3-of-5</i> 20% (200,000,000) → AMM / DEX liquidity 15% (150,000,000) → Team & Core vesting 10% (100,000,000) → OCI nodes & validators 5% (52,500,000) → Community Ethics Fund

Operational Mining & Settlement Vault (500,000,000 LUXA — 50%): operational liquid reserve held at address `luxa1eg6d8axpw2t3en2g8t0g5qtj4wm2fh3q4tmkue`. This vault serves solely to guarantee bridge payouts when certified users redeem their mined balance.

Conseil de la Genèse Reserve (502,500,000 LUXA — 50%): cold sovereign reserve jointly controlled by a 3-of-5 Multisig account whose signing powers belong to the 5 holders of the Ministerial Seal NFTs. No single individual can move these funds without the consent of the qualified majority of the Council.

3. Pillar 2: Decennial Halving, Dynamic Difficulty (7M+ Pioneers) & Fibonacci Matrix

3.1 Geometric Halving Curve over 10 Epochs

The 500,000,000 LUXA mining reserve is distributed along a decreasing mathematical curve of 10 years (annual epochs of 365 days):

Epoch	Window	% Issued	LUXA Issued in the Epoch	Cumulative Distributed	Daily Network Budget
Epoch 1	Year 1	50.00%	250,000,000	250,000,000	~684,931 LUXA / day
Epoch 2	Year 2	25.00%	125,000,000	375,000,000	~342,465 LUXA / day
Epoch 3	Year 3	12.50%	62,500,000	437,500,000	~171,232 LUXA / day
Epoch 4	Year 4	6.25%	31,250,000	468,750,000	~85,616 LUXA / day
Epoch 5	Year 5	3.125%	15,625,000	484,375,000	~42,808 LUXA / day
Epochs 6–10	Years 6–10	~3.125%	15,625,000 (tail)	500,000,000	Decreasing to 0

By the tenth year issuance stops: validator nodes and miners will be remunerated solely by the protocol settlement fees and by AMM pool volume.

3.2 Dynamic Difficulty & Absorption of 7,000,000+ Pioneers

To prevent the mass entry of users from draining the reserve, the protocol applies a dynamic-difficulty principle:

$$Daily\ Reward(i) = Network_Budget_per_Day \times \left[\frac{M_{fibonacci}(i)}{\sum_{j=1}^{N_{active}} M_{fibonacci}(j)} \right]$$

- **Target of 7,000,000 Pioneers:** on a pool of 500M LUXA, the average per-capita distribution over the 10 years stands at about 71.43 LUXA per pioneer.
- **Infinite Scalability:** should the network reach 10 or 20 million users, the 500M reserve remains inviolable. The reward per session simply shrinks fraction by fraction toward the uluxa micro-unit, increasing its organic rarity.

3.3 Fibonacci Harmonic Matrix & Anti-Bot Penalty

Mining sessions last strictly 24 hours. Consistency unlocks progressive multipliers tied to the golden sequence ($\Phi = 1.618033$):

Streak	Multiplier	Note
Day 1	1.00×	Base
Day 2	1.20×	
Days 3–4	1.30×	
Days 5–7	1.50×	
Days 8–12	1.62×	Φ Golden Ratio
Days 13–20	2.00×	Regime doubling
Days 21–33	2.50×	
Days 34–54	3.00×	
Day 55+	3.62×	Permanent sustainable peak, equal to $1+\Phi+1$

Continuous Penalty Rule: failing to renew the session within the grace window instantly cancels the streak, returning the account to Day 1 (1.00×) with the ▼ LOSS market indicator. This parameter nullifies the profitability of automated farms operating intermittently.

4. Pillar 3: On-Chain Migration Requirements, 60 Days & Sumsb KYC Protocol

The balance-transfer button toward Layer 1 (Claim to On-Chain Vault) in the user wallet is protected by three cumulative cryptographic keys:

KEYS TO L1 SETTLEMENT ACCESS

Key	Requirement	Condition
[1]	Global Network Milestone	Reaching 7,000,000 Pioneers
[2]	Active Proof of Work	≥ 60 days of continuous mining
[3]	Identity Validation	3D biometric KYC verification (Sumsb)

[GENESIS EXCEPTION]: Citizen Zero (Seal #0 / Green Card) → instant bypass, without the 60-day requirement.

Appeal Policy and Zero Confiscation: in case of documentary discrepancies or failed biometric recognition, accumulated funds are never confiscated. The user is entitled to 3 protected appeal windows and to manual intervention by the Compliance Desk.

5. Pillar 4: 8% Settlement Rule, Shard Forging & Zero-Gas Layer 1

5.1 The 8% Virtuous Circuit

Every settlement transaction from the mining ledger to the sovereign luxa-1 chain applies a Protocol Settlement Fee of 8% (and 4% on Shards) plus a network micro-fee of 0.001 LUXA:

$$\text{Net Credited} = \text{Gross Mined} - (\text{Gross} \times 0.08) - 0.001 \text{ LUXA}$$

- **92% Guaranteed Net:** confirmed deterministically on the user luxa1... account.
- **100% Reinjection:** the withheld 8% returns in full to the Operational Mining Vault and the AMM reserves, to guarantee perpetual liquidity for later generations of miners.
- **Zero Gas Layer 1:** all subsequent transfers between Spider Vaults on the luxa-1 network cost 0 LUXA in gas.

5.2 Deterministic Forging Parity

Shards (ushard) are governed by the invariable formula:

$$10,000 \text{ SHARDS} = 1.0 \text{ LUXA}$$

The operation destroys the computational asset and issues sovereign L1 currency validated by the banking module.

6. Pillar 5: Conseil de la Genèse & the 5 Ministerial Seals (Native 3-of-5 Multisig)

The ecosystem provides no pay-to-play heroes, speculative licences or hidden privileges. Layer 1 governance is entrusted to the 5 Ministerial Seals (NFT class luxa-relics, Token IDs #0 to #4), integrated into a Cosmos SDK native Multisig with a 3-of-5 threshold:

THE 5 SEALS OF THE CONSEIL DE LA GENÈSE

ID	Official Seal Name	Institutional Role in the Council	Custodian Address
#0	Citizen Zero	Sovereign Architect & Root Validator	luxa1z4jpt568npsvpass...
#1	Chrono-Key Master	Minister of Settlements	luxa1eg6d8axpw2t3en2...
#2	Cyber-Shadow Node	Minister of Cryptographic Security	luxa1eg6d8axpw2t3en2...
#3	Grandmaster of Servers	Minister of Infrastructure & Nodes	luxa1eg6d8axpw2t3en2...
#4	Neon Data Valkyrie	Minister of Liquidity & AMM	luxa1eg6d8axpw2t3en2...

- **Citizen Zero (#0):** held by the founder Yassine Ouadil, it is the primary validation anchor and the presidency of the Council.
- **Seals #1–#4:** assigned to the operational ministers to oversee, respectively, the settlement parameters, multi-vault security, the validator cluster and the stability of the exchange pairs.
- All Seals are permanent, non-sellable and not negotiable on the open market.

7. Cross-Platform Spider Vault Mesh (Chrome, Android, Web & Telegram)

The security of private keys is entrusted to the Spider Wallet network architecture:

- **Client-Side Derivation:** local symmetric encryption via PBKDF2 (100,000 iterations) and authenticated AES-256-GCM, protected by the user PIN.
- **Multi-Vault Architecture:** each user can manage up to 10 independent vaults (luxa1...), isolating daily mining from high-security cold storage.
- **Cross-Platform Availability:** operational as a Telegram Mini App, Google Chrome Extension (Manifest V3), native Android application (with encrypted backup on private Google Drive) and iOS client.

8. Official Ratification — Covenant in English

[EN] • OFFICIAL ENGLISH COVENANT

LUXA Sovereign Layer 1 Consensus Framework (luxa-1)

Under the Authority of Citizen Zero (#0) • Root Validator & Sovereign Architect Yassine Ouadil

Constitutional Supply & Dual-Vault Protocol: The unalterable supply ceiling is established at 1,002,500,000 LUXA and 16,000,000,000 Shards. Custody is split into two equal 50% chambers: the Operational Mining Vault (500M LUXA) dedicated strictly to user claims, and the Conseil de la Genèse Sovereign Reserve (502.5M LUXA) governed by a 3-of-5 native Cosmos SDK multisig.

10-Year Halving Curve & 7M Pioneers Scaling: Mining emission follows a 10-year geometric halving curve across 500M LUXA (Year 1: 250M, Year 2: 125M, halving down to Year 10). Dynamic difficulty absorbs 7,000,000+ pioneers without budget exhaustion, enforcing an average yield of ~71.43 LUXA per node. Missing a 24-hour cycle resets the Fibonacci streak (1.00x to 3.62x) back to Day 1 with an instant loss indicator.

The 3-Key Settlement Gateway: Withdrawing to Mainnet L1 requires reaching 60 validated mining days, completing Sumsb biometric KYC, and reaching the 7M network milestone. Citizen Zero (#0) retains sovereign Green Card exemption. Document rejection provides 3 non-confiscation review cycles.

Circular 8% Settlement Fee: On-chain withdrawals deduct an 8% protocol replenishment fee and 0.001 LUXA gas. The 92% net balance is delivered to the user Spider Vault with zero subsequent Layer 1 network gas fees. Shards convert immutably at 10,000 : 1.

The 5 Ministerial Seals (#0–#4): Protocol authority is soulbound to the 5 Genesis Relics governing the Conseil de la Genèse Multisig. All commercial hero sales and pre-mine speculations are permanently eradicated.

9. Certificate of Authenticity & Genesis Signing Act

This White Paper v3.0 constitutes the binding and immutable technical specification of the luxa-1 network. Any future change to the fundamental economic parameters or to the Dual-Vault contracts will require formal on-chain approval by at least 3 signatories of the Conseil de la Genèse holding their respective Cryptographic Seals.
